EDUCATION

University of Calgary
Bachelor of Science in Software Engineering

Calgary, AB, Canada
September 2021 - April 2027

EXPERIENCE

Software Developer Intern

May 2026 - Present

Morgan Stanley

Calgary, AB, Canada

- Contributed to Shareworks, Morgan Stanley's employee equity compensation platform, supporting the launch of high-profile IPOs including **SpaceX**, **Anthropic**, and **OpenAI**.
- Developed and tested platform features using **Java** and **Jenkins** on a system processing \$19B+ in liquidity transaction volume, while facilitating code reviews and sprint/epic planning to enhance reliability.
- Applied frontier AI models for spec-driven development, automating portions of QA, workflow validation, and feature scaffolding.

Software Engineering Coop

September 2025 - May 2026

Mawer Investment Management

Calgary, AB, Canada

- Developed internal automation tools using VueJS, NestJS, PostgreSQL, and Azure DevOps, projected to increase asset utilization by 25%.
- Built backend services that supported multi-step operational workflows across investment teams, integrating REST APIs and internal data systems.

Engineering Coop IT Specialist

September 2024 - September 2025

Atco Energy Systems

Calgary, AB, Canada

- Automated data collection from 300+ SCADA gas sample probes using **RPA**, improving reliability of Alberta's gas distribution network.
- Designed and deployed internal tools using Typescript, DrizzleORM, Sharepoint, and Knime, reducing document turnaround times by 40%.
- Spearheaded the development of a new student Coop hiring solution via Microsoft Powerapps and Sharepoint, enhancing recruitment efficiency by over 60%.

CLUBS AND EXTRACURRICULARS

Telemetry Team Lead | *Calgary Solar Car*

October 2022 - Present

- Managing and leading a team of 9 students building real time web apps for electric solar vehicles.
- Developing data visualizations through SQL and Grafana, contributing to dynamic race strategy during Formula Sun Grand Prix 2025.
- Utilizing **Python** and Scikit-learn within **Docker** containers to analyze vehicle data, providing insights that optimized driver performance and vehicle efficiency.

Full Stack Developer | *Code The Change YYC*

December 2023 - Present

- Developing a web based Hackathon Management Tool leveraging React, AWS, and Git, reaching over 200+ users annually.
- Implementing a content management system along with role based access control together with a team of 12 developers, optimizing for speed and scalability.

TECHNICAL PROJECTS

480Airlines: Modern flight reservation web application leveraging React and Node.js.

Toolshed: Web app for sharing tools and equipment, featuring cloud services and testing frameworks.

Tmangroup: CMS-powered website for localDJ to share event updates and upcoming shows.

theCookBook: React app focused on helping users create and manage cooking recipes.
